

Path to degree & self-realization in education

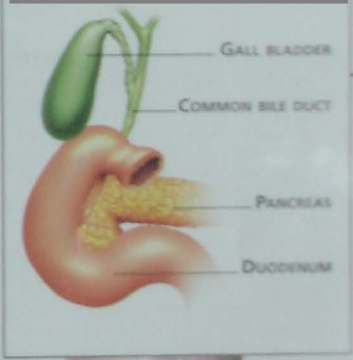

00:00:00
You begin your classes at Saint Paul College

You are told that you are developing your mind but are asked to digest all of this new information you could have gotten from library books or asking the the right people for help.

The tongue swells and salivary glands become active like you may vomit as you sign student loans.

TONGUE
SALIVARY GLANDS empty enzyme-containing saliva into mouth during chewing
OESOPHAGUS

GALL BLADDER AND PANCREAS
It took a lot of gall to tell you this degree could provide more income than you would pay out in monthly loan instalments, luckily you had an extra kidney and are blonde and could sell one of your eggs to help with living expenses so you could become a receptionist at a great local law firm where maybe you can marry a lawyer who drinks too much and is in eternal midlife crisis.

00:00:10
You are 24 but often your stomach is in knots--acid bile are eating your esophagus and you find it hard to swallow.

03:00:00
What gets through is a creamy paste like cement that hardens your insides

LIVER
STOMACH

PANCREAS releases enzymes into the small intestine when food arrives there

06:00:00
the small intestine has begun to absorb what knowledge has been digested as nutrients and you realize that you could have made yourself do this work without paying these teachers who cannot do the work they teach. Or why are they here?

SMALL INTESTINE

LARGE INTESTINE

APPENDIX plays no part in digestion in humans but does in some other animals

RECTUM

20:00:00
Most of the waste, which is the majority of what you have ben told and you realize, what you spent, and whatever liquid assets have been removed and what is left is hard to form faeces..

32:00:00
Everything has turned to shit, and now you know you still have to find a job but with loan payments.

The outcome of this experience has left your ass dirty and if you don't clean it you will be completely unemployable. Please take a Saint Paul College Diploma from the dispenser.
